```

Queremos realizar una funcion que actue sobre un dataset que contenga variables categóricas y donde a cada variable categorica haya asociada una o varias variables numéricas . La funcion realizara la tarea de crear un boxplot recibiendo 5 inputs que seran dataset, variable numerica, variable categorica, color 1 y color 2

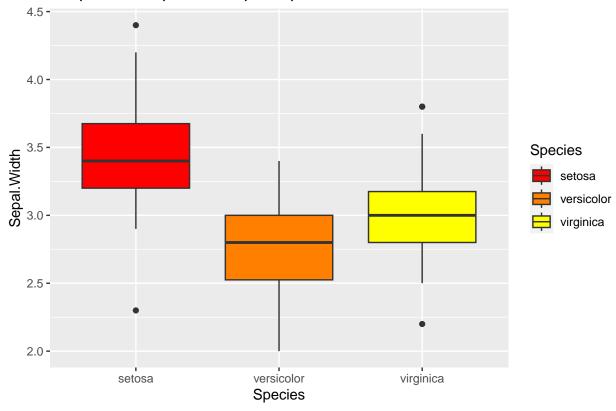

```
library(ggplot2)
mi_boxplot <- function(data, var_numerica, var_categorica, color1, color2) {</pre>
```

Queremos realizar una funcion que actue sobre un dataset que contenga variables categóricas y donde a cada variable categorica haya asociada una o varias variables numéricas. La funcion realizara la tarea de crear un swarmplot recibiendo 5 inputs que seran dataset, variable numerica, variable categorica, color 1 y color 2

```
library(ggplot2)
mi_violinplot <- function(data, var_numerica, var_categorica, color1, color2) {</pre>
  # Convertimos la variable categórica en un factor
  data[[var_categorica]] <- factor(data[[var_categorica]])</pre>
  # Definimos los colores para cada nivel de la variable categórica
  n <- length(levels(data[[var_categorica]]))</pre>
  col <- colorRampPalette(c(color1, color2))(n)</pre>
  relleno <- col
  # Crear el violinplot
 p <- ggplot(data, aes(x = !!sym(var_categorica), y = !!sym(var_numerica),</pre>
                         color = !!sym(var_categorica), fill = !!sym(var_categorica))) +
    geom_violin(size = 3, alpha = 0.7) +
    scale_color_manual(values = col) +
    scale_fill_manual(values = col) +
    xlab(var_categorica) +
    ylab(var_numerica) +
    ggtitle(paste("Swarmplot de ", var_numerica, " por ", var_categorica))
  return(p)
}
```

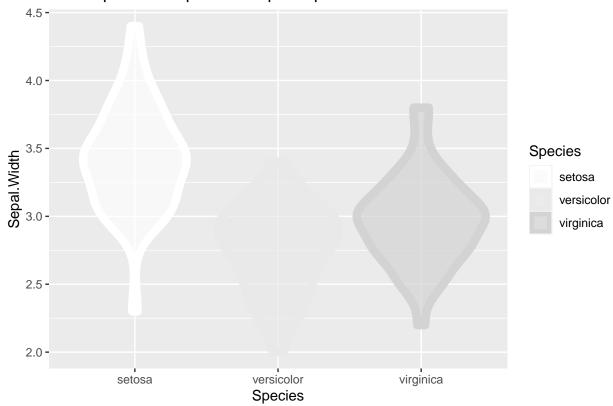

```
# Ejemplo 1: Dataset iris
mi_boxplot(iris, "Sepal.Width", "Species", "red", "yellow")
```

mi_violinplot(iris, "Sepal.Width", "Species", "white", "lightgrey")

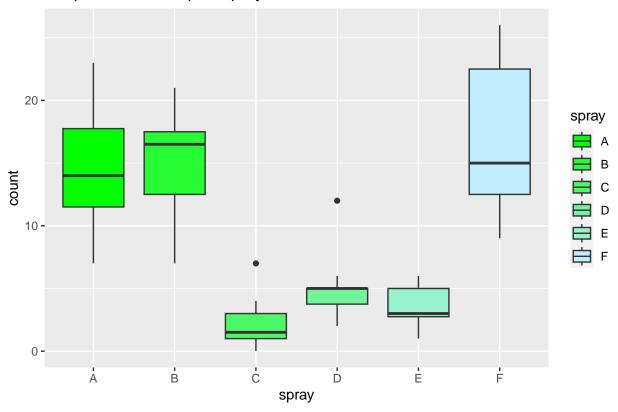

Ejemplo 2: Dataset InsectSprays head(InsectSprays)

```
count spray
##
        10
                A
## 2
         7
## 3
        20
                Α
## 4
        14
                Α
## 5
        14
                A
## 6
        12
                Α
```

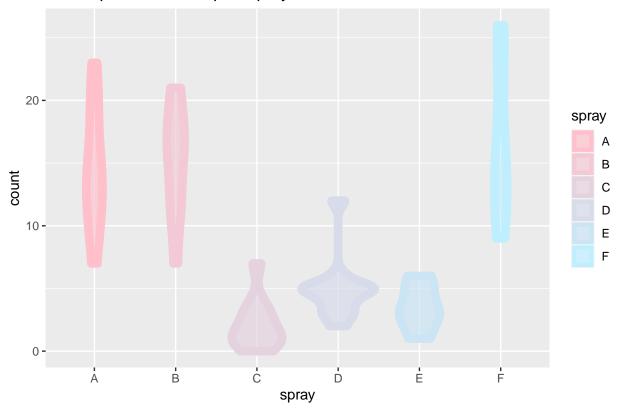

```
mi_boxplot(InsectSprays, "count", "spray", "green", "lightblue1")
```

Boxplot de count por spray

mi_violinplot(InsectSprays, "count", "spray", "pink", "lightblue1")

Swarmplot de count por spray

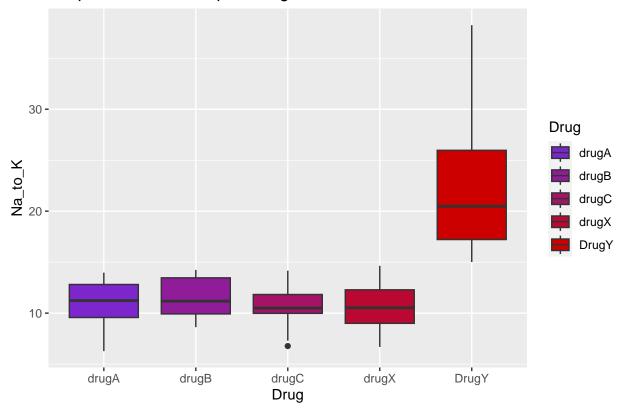

```
# Ejemplo 3: Drug200

data = read.csv("Drug200.csv")
#head(data)

mi_boxplot(data, "Na_to_K", "Drug", "purple3", "red3")
```

mi_violinplot(data, "Na_to_K", "Drug", "red3", "purple3")
